PROFESSIONAL SUMMARY

Full Stack Software Engineer with over 2 years of experience building scalable, production-grade applications using Ruby on Rails, Node.js, Express.js, React, Next.js, and MongoDB / PostgreSQL. Proven expertise in designing and maintaining MERN stack solutions, microservices-based platforms, RESTful APIs, and multi-tenant architectures. Skilled in implementing secure authentication systems using JWT, RBAC, and OAuth, and integrating real-time communication with MQTT and WebSockets. Experienced in containerized deployments with Docker and Docker Swarm and automating CI/CD pipelines using GitLab. Adept at building Elasticsearch-powered search functionality, optimizing database performance, and providing production support in Agile environments.

EMPLOYMENT HISTORY

Software Engineer – Greenbotz Platform Pvt Ltd *(Nov 2024 – Present)*

- Develop and maintain full stack web applications using Ruby on Rails, Node.js, Express.js, and React within microservices and MERN architectures.
- Design and build RESTful APIs consumed by React frontends and third-party integrations, maintaining consistent JSON contracts.
- Implement JWT-based authentication and RBAC authorization to secure APIs and enforce role-based access control across services.
- Optimize PostgreSQL and MongoDB queries and schemas to improve application performance and reduce response latency on high-traffic endpoints.
- Build Elasticsearch-powered search features and manage background job processing with Redis and Sidekiq for reports, notifications, and scheduled tasks.
- Containerize services with Docker and configure GitLab CI/CD pipelines to automate testing, builds, and deployments.
- Deploy and monitor services on AWS, troubleshooting and resolving production issues to maintain system stability.
- Collaborate with cross-functional teams in Agile/Scrum sprints, contributing to code reviews, architecture discussions, and sprint planning.

Part-Time Frontend Developer – Investilio AI (Alongside full-time role) *(Dec 2025 – Feb 2026)*

- Developed AI-powered dashboard interfaces using Next.js, React, and Node.js backend integrations, presenting data-driven insights through interactive charts.
- Integrated REST APIs to fetch and render real-time AI-generated data within dashboard components.
- Implemented authentication and secure session handling to control dashboard access.
- Built responsive, mobile-friendly UI layouts using Tailwind CSS across dashboard modules.
- Optimized frontend performance, improving load times and rendering efficiency for data-heavy views.

Frontend Developer – NeoSME *(Apr 2024 – Nov 2024)*

- Built responsive, reusable UI components using React and JavaScript (ES6+) for consistent cross-device user experiences.
- Integrated REST APIs into frontend applications, handling data fetching, loading, and error states for smooth interactions.
- Managed application state using Redux, improving predictability and maintainability of complex UI flows.
- Implemented authentication flows and protected routes to secure access to application features.
- Identified and resolved frontend bugs and UI inconsistencies, improving application stability and user experience.
- Optimized component rendering and asset loading to improve page load performance.
- Collaborated with backend developers and designers in Agile sprints, using Git for version control.

KEY PROJECTS

BiomeX - Smart Building Management Platform

Tech Stack: *Node.js, Express.js, MongoDB, React, Next.js, MERN Stack, Ruby on Rails, Microservices, PostgreSQL, Redis, Sidekiq, Docker, Docker Swarm, Elasticsearch, AWS, JWT, MQTT, WebSockets, Socket.IO, Tailwind, Material UI*

- Developed and maintained a multi-tenant Building Management Platform comprising 12+ microservices using Rails and Node.js/Express.js.
- Designed schema-per-tenant architecture using PostgreSQL Apartment and managed document structures with MongoDB.
- Built REST APIs consumed by React web and mobile applications.
- Developed an API Gateway and authentication services using JWT (RS256), Warden, RBAC, and service-to-service authentication.
- Implemented Redis and Sidekiq background jobs for reports, parking automation, scheduling, and notifications.
- Built Elasticsearch and Searchkick-powered search functionality.
- Integrated MQTT and WebSockets for real-time IoT communication.
- Integrated AWS S3, Rekognition, KMS, Stripe, Twilio, Firebase Cloud Messaging, Sentry, and Graylog.
- Deployed applications using Docker Swarm and GitLab CI/CD.
- Built three React applications for residents, administrators, and visitors, including dashboards, booking, resident/visitor management, complaints, parking, reports, payments, and admin portal modules.

TECHNICAL SKILLS

- **Full Stack & Frameworks:** MERN Stack (MongoDB, Express.js, React.js, Node.js), Next.js, Ruby on Rails
- **Frontend:** React.js, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI, Ant Design, React Router, Redux, Formik, Yup, Styled Components
- **Backend & APIs:** Node.js, Express.js, Ruby, Ruby on Rails, REST APIs, JSON APIs, MVC Architecture, ActiveRecord, Devise, JWT Authentication, OAuth, RBAC, API Gateway, Microservices, Multi-tenancy, Background Jobs
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis, Elasticsearch, Searchkick
- **Cloud & DevOps:** Docker, Docker Swarm, Git, GitHub, GitLab, GitLab CI/CD, AWS (S3), Linux, Vercel
- **Messaging & Real-Time:** MQTT, Mosquitto, WebSockets, Socket.IO
- **Testing & Quality:** Rubocop, Postman, REST API Testing
- **Practices:** Agile, Scrum, OOP, SOLID, Performance Optimization, Database Optimization, Code Reviews, CI/CD Pipelines
- **AI Coding Tools:** Cursor, ChatGPT, Claude, Gemini

EDUCATION & CERTIFICATIONS

Bachelor of Engineering in Computer Science and Engineering – Graduated 2023

MERN Stack Development (12-Month Certification)
